Through innovative management and high-tech strategy for the best quality,

FRIXA searches for customers' dignity and becoming one of the highest standard global enterprises.

FRIXA is a member of the Hankook Tire Group of companies which has grown up to a global enterprise with customers' confidence and support, and came to participate in the brake system parts business for automobiles and industrial machinery, as a part of the Group's business line expansion programme.

Through continuous development of advanced technology and strict quality control, FRIXA has been recognized as a promising enterprise specializing in the friction material. Production of the environment friendly products and the car racing brake pads and the rotors especially, which is taken as the essence of the brake system technology, has made FRIXA acknowledged, at home and abroad, as one of the most prominent automotive parts manufacturers.

We are deeply grateful for customers' attention and support that has brought us to achieve all these things, and promise to reciprocate the kindest favor with our continuous passion and challenge to become a first class enterprise which takes customers' advantage more important than anything else.

Thank you.

CEO, FRIXA CO., LTD. **Choi, Hyeong-gi**

FRIXA, jumping lively towards the world.

Based on the certified technical capability, FRIXA plays a leading role in globalization of Korean technology.

FRIXA was established in August, 1991 with the head office and production site in Suncheon. It has been developing new products and improving the quality with the support of Hankook Tire R&D center in Daejeon, and supplying the products through Hankook Tire's distribution network. FRIXA has upgraded its production system by certification of TS16949 and ISO9001 in January, 2004.

FRIXA products protect driver's safety and enhance comfort with the excellent braking performance, thermal endurance, durability, low noise and minimized wheel dust. It is exporting the products to more than 20 countries all over the world.

- 1991 Company establishment
- 1966 Secured patents in Korea, U. S. A, Japan, Germany
- 1996 Certified of Korea Standard
- 2001 Created dedicated R&D division(Korea Industrial Technology Association)
- 2003 Certified of QS9000 and ISO9001
- 2004 First release of Premium Pad
- 2005 Selected as one of the best products in second half of 2005(by Hankook Ilbo)
- 2005 Certified of ISO/TS 16949 and ISO9001
- 2005 First release of racing brake pad
- 2006 Designated as a promising export small enterprise
- 2006 Contracted for authorized sponsorship of racing brake pads for Speed Festival held by KMRC
- 2007 Designated as a promising small enterprise
- 2008 Secured E mark (E9-90R-01.813/547) authorized by EU
- 2009 First release of racing disc rotor
- 2009 Disc brake pad was selected for an officially designated component for 2009 CJ O SUPER RACE held by KGTCR
- 2009 Awarded One Million US Dollars as export tower by Ministry of Knowledge and economy
- 2010 Continued Disc brake pad and disc rotor were selected for an officially designed components for 2009 CJ O SUPER RACE held by KGTCR
- 2010 Designated as small business of technical innovation
- 2010 Awarded various prize by Provincial Government
- 2010 Launched "SPY MOTORSPORT" for Caterham race car, UK
Launched "BURNETT MOTORSPORT" for Legend race car, UK

FRIXA, the most prominent brake parts manufacturer, producing value rather than products that provides both satisfaction in quality and care about the environments.

One-step-ahead science achieved by constant research and development is FRIXA's attraction.

Excellent braking power

FRIXA product's braking power is excellent, with average friction coefficient of 0.36-0.4 . There could be braking deviation depending on variation of speed or temperature, but FRIXA products maintain stable braking power under various circumstances.

Reduced Noise

Almost no noise of FRIXA product under 70dB provides comfortable driving. Braking noise produces displeasure and intensifies physical fatigue of driver. FRIXA product minimizes the noise for comfortable driving.

Minimized Wheel Dust

Metallic series materials of major cause of the wheel dust is minimized with FRIXA products, and high grade materials of aramid fiber and titanitic acid kalium instead is adopted for main materials, to reduce the wheel dust and maintain clean wheel condition.

High Grade Material

Titanitic Acid Kalium

- Excellent heat resistance, insulation and abrasion resistance
- Extended life span due to 3.5~4.0 times higher tensile strength than that of the normal material

Aramid Fiber

- High grade material of superior tensile strength and high elastic
- Minimized wheel dust due to less adhesion to wheel of the abrasion dispersion.

Minimized Damage to Disc Rotor

Damage to the disc rotor by brake friction material causes driver's displeasure or disturbs stable braking function. FRIXA products have minimized this.

Excellent Safety at High Temperature

FRIXA product's excellent fade-resistance at repeated braking under high temperature enables safe driving at all times. (Fade: The phenomenon that braking function is impeded by decrease of friction coefficient at high temperature of the friction material)

Environment friendly Products

FRIXA product's top priority is the environment and health, which do not have in the friction material ingredients the harmful heavy metals of Pb, Cd, Hg or Cr, neither the asbestos nor the glass fiber that may cause lung cancer if breathed in.

Technical Certificates

• Million Dollar Export Tower 2009

• E-Mark

• Form No.100697 Patent

• Form No.100698 Patent

• Form No.10-0784333 Patent

• Trademark registration card

• ISO/TS 16949

We guarantee accurate and safe braking
We manufacture and provide the products of all kinds of cars at home and from passenger car to light truck
The products of FRIXA has low noise in all vehicles

FRIXA composition

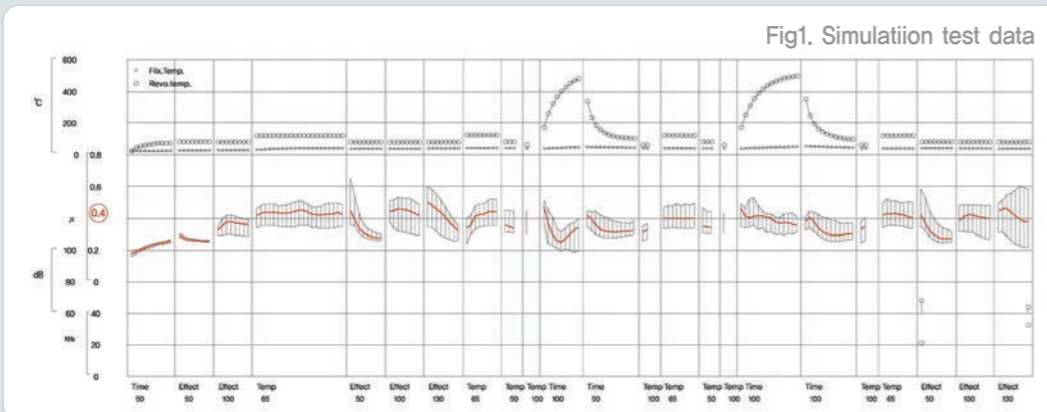

- 1 **Friction material**
Generates braking power by friction with disc.
- 2 **Slot**
A groove cut from the top in the middle of friction surface, along which dust worn by friction material is discharged and it also gives an effect of diminishing noise.
- 3 **Chamfer**
Both ends of friction surface ground to have them sloped down. It gives an effect of diminishing vibration and trembling.
- 4 **Sensor**
It indicates a limit beyond which friction material is not allowed to be worn. Two of four sensors per set is to be attached.
- 5 **Shim**
Prevents heat generated by braking from being transmitted to cylinder, thereby diminishing vibration and minimizing noise.
* It may not be necessary depending upon characteristics of vehicle.
- 6 **Back plate**
Steel plate to be fixed onto caliper. It bear weight of hydraulic cylinder.

FRIXA Core Technology

Excellent braking control(power)

With average friction co-efficient of 0.36 – 0.40 μ , it is excellent in braking power. Though in general braking deviation is caused by variation in speed and temperature, FRIXA is capable of stable braking power under any circumstances.

FRIXA CORE TECHNOLOGY

Reduction in noise

You can drive comfortably with virtually little noises(below 70db). In general, braking noise not only gives a driver unpleasant feeling but also makes him(her) very tired. FRIXA minimizes noise, thus enabling you to drive comfortably.

Keeping wheel dust to a minimum

Use of metallic materials, a major cause of wheel dust, is kept to a minimum and advanced materials such Aramid fiber, K2O etc. are adopted as major materials to diminish wheel dust, thus keeping wheels clean.

• Comparison of Wheel dust

FRIXA
Renders wheels clean by using advanced materials (wheel dust is kept to a minimum)

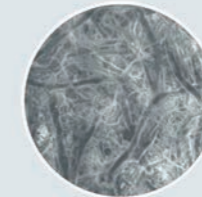

Others
Renders wheels contaminated by dust due to use of metallic materials such as steel fiber

• Use of advanced materials

K₂O 6TiO₂
– Excellent in heat-resistance, insulation and durability
– Extended lifetime due to tensile strength strong 3.5-4 times as much as general materials

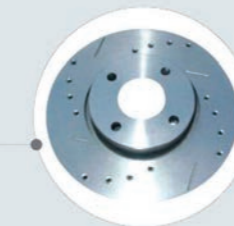

Aramid fiber
– Excellent in tensile strength and elasticity
– Wheel dust is kept to a minimum as only a little of worn dust is adhered to wheel surface.

Minimizes damage to disc rotor

Damage to disc rotor caused by brake friction material may give you unpleasant feeling while driving or a brake may not work in a properly stable condition. FRIXA minimizes damage to disc rotor.

FRIXA minimizes damage to disc rotor using less metallic materials

Metallic materials like steel fiber cause damage to disc rotor, thus generating harsh noise and making it difficult for you to drive safely. FRIXA improves the problem by using less metallic materials.

Superb High Temperature Stability

Despite repeated braking in overheated condition (high temperature), it is superb in anti-fade property, thus enabling you to drive safely.

* Fade : When friction material is overheated, its friction coefficient drops, thereby losing braking power.

Eco-friendly product

Heavy metals i. e. Pb, Cd, Hg, Cr, hazardous to the human body are not used in friction material (pad). Asbestos and glass fiber which, if inhaled, cause lung cancer are not used either. FRIXA considers protection of environment and human health to be top priority.

Confidence in Perfect Control!

**Safety insurance for the customers!
You are already a rich man.**

Confidence in driving! The confidence may have some reasons. Find the answer with FRIXA. With the FRIXA "Taxi", the life span of the friction material is extended by about 40% than that of the normal products with the NAO series ingredients in the material, the wheels can be cleanly maintained all the time because the wheel defilement is reduced with the ingredients of the high-tech fiber of the kevlar and potassium titanate instead of the steel fiber, which is the main cause of such defilement by dusts from braking, and the disc rotor abrasion also is reduced.

Excellent braking · Reduced Noise · Minimized Disc Rotor Abrasion · Environment-friendly Products · Minimized Wheel Dust

FRIXA Taxi Core Technology

Excellent Braking : It has excellent braking efficiency, abrasion resistance and reduced noise, which is good for such vehicles that require abrasion resistance as those for commercial use. Average friction coefficient is 0.36-0.40 μ level, and it allows stable braking performance even at the time of instant or repeated stops, because the braking declination is reduced.

Extension of Life Span : Its life span is about 40% longer than that of the normal products for passenger cars.

Reduced Noise : Braking noise produces displeasure and intensifies physical fatigue of driver. FRIXA product minimizes the noise for comfortable driving.

Minimized Damage to Disc Rotor : Generally, the product of improved abrasion resistance causes more damage to disc rotor, but FRIXA TAXI produces transition layer on its surface at the time of friction to minimize the damage to the disc rotor.

Environment Friendly Product : It protects pad replacement worker's health, because it does not have in the friction material the harmful heavy metals of Pb, Cd, Hg or Cr, neither the asbestos nor the glass fiber that may cause lung cancer if breathed in.

Minimized Wheel Dust : It produces only a little amount of wheel dust and keeps the wheels clean all the time.

FRIXA Ultra Taxi Core Technology

Extension of Life Span : Its life span is more than 100% longer than that of the normal pads for passenger cars.

Excellent Braking : Average friction coefficient is 0.36-0.40 μ level, which ensures stable braking performance even at the time of instant and repeated braking.

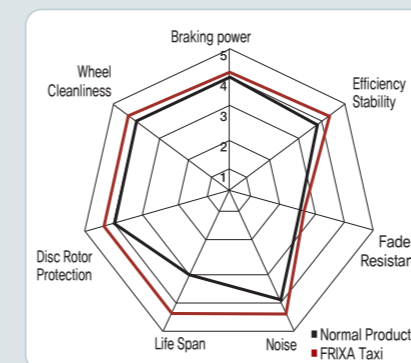

Comfortable Driving with Low Noise : Braking noise is minimized to allow comfortable driving.

Less Wheel Dust : Wheel dusts sticking to the wheel is minimized to keep the wheels clean all the time.

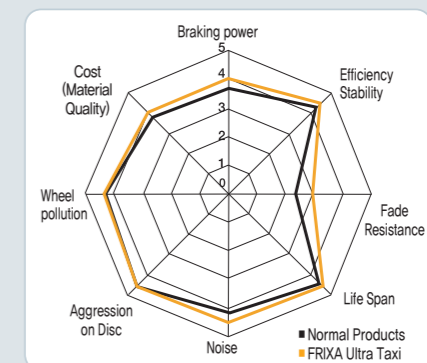

Minimized Damage to Disc Rotor : It produces film layer between the friction material and the disc, which reduces the damage to the disc rotor and abrasion of the pad.

Products Characteristics Comparison

► FRIXA Taxi

► FRIXA Ultra Taxi

Confidence in Perfect Control!

Slugout of 0.01 second!

FRIXA COMPETITION has been developed for car racers and speed mania. With the high function compound material of the ceramic fiber, it exercises strong braking capacity (high temperature braking power 0.30–0.45). The braking power and the stability also has been improved for the competition for 0.001 second, with minimized braking declination at high temperature and fade control at repeated braking.

Pad for expert racing, Blazing Red Color Back Plate, Strong Braking Power with Minimized Braking Declination at High Temperature, Fade Control at High Temperature and Repeated Braking (workable at ultra high temperature of 800°C), Application of Scorching Method. Increased Initial Bite

FRIXA CORE TECHNOLOGY

Strong braking capacity for Racing

FRIXA COMPETITION is optimized for racing with the friction coefficient of 0.30–0.35 μ level for COMPETITION "A" and the 0.38–0.45 μ level for COMPETITION "B", while that of the normal pads under the racing is 0.25–0.15 μ level.

Stability at High Temperature

When the average friction coefficient is high, braking declination occurs depending on the change of speed and braking temperature, but FRIXA COMPETITION maintains excellent braking stability and fade resistance in such changes.

Abrasion Resistance at High Temperature

Racing pad has to have abrasion resistance at high temperature, because it has to work frequently at high speed and high temperature. FRIXA COMPETITION is suitable for racing with its braking power and stability as well as the abrasion resistance.

※Usable Temperature Range: 300–800°C

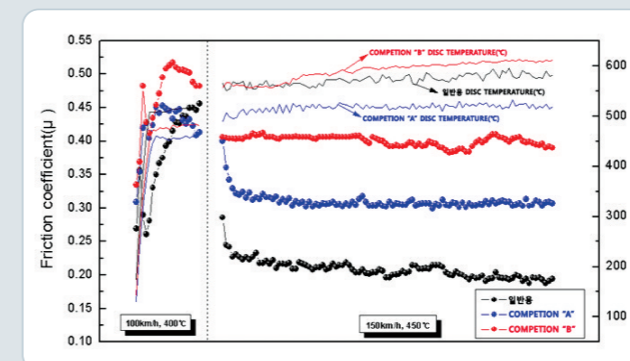

Improved Adhesion Strength at High Temperature

High temperature is produced during racing from the speed reduction and braking at ultra high speed, and the friction material may separate from the back plate under the high temperature. For FRIXA COMPETITION, the strength reinforced back plate is developed by FRIXA's patent technology, to improve the adhesion strength and prevent such separation under high temperature.

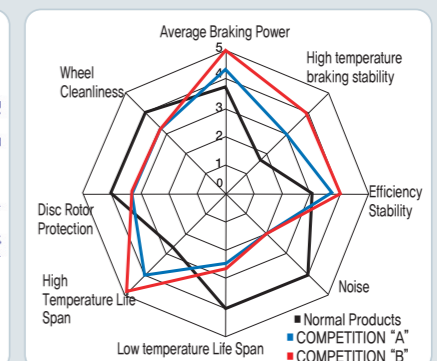

Verified Performance

FRIXA COMPETITION is being used at Korea's most prominent professional racing competition of the CJ Super Race 3800 Class, 2000 Class and 1600 Class, receiving applausive responses from all the racers of the participating teams.

Simulation Test Data

Products Characteristics Comparison

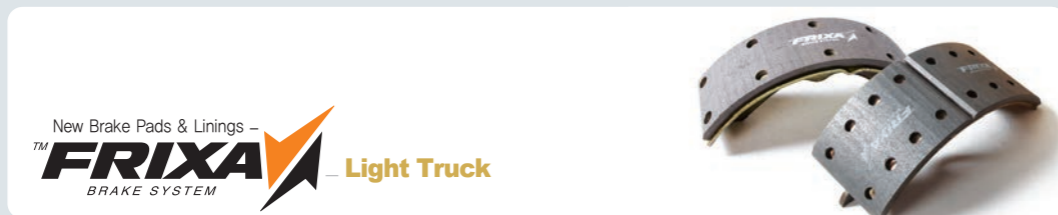

Confidence in Perfect Control!

So, you are safe!

FRIXA Light Truck has been developed with the top priority given on the driver's safety, to exercise stable braking power under such diverse operating conditions for the light trucks, as the different cargo loads or various road conditions, and to maintain constant braking performance at high temperature frequently produced by repeated braking.

**Excellent braking · Reduced Noise · Least Damage to Disc Rotor
Environment-friendly Product · Least Wheel Dust**

FRIXA CORE TECHNOLOGY

Excellent Braking : FRIXA LT is designed to minimize the brake slide phenomenon with the advanced high grade material to ensure stable braking power at high speed driving or the instant and repeated braking.

Minimized Noise : Braking noise produces displeasure and intensifies physical fatigue of the driver. FRIXA LT minimizes the noise and vibration for comfortable driving.

Extended Life Span : With the high grade material, the life span is extended to be 1.5 times of the normal pads.

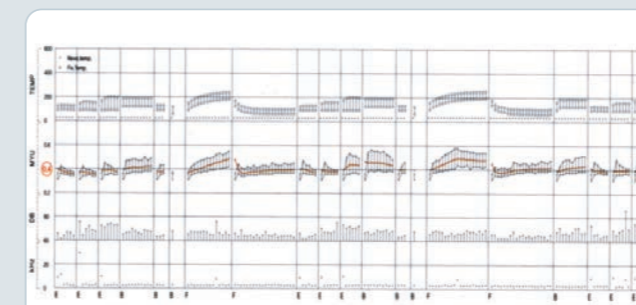

Anti-Vibration Chamfer : The chamfer on each end of the lining reduces vibration to help comfortable driving.

Convenience : Wear limit line shows the lining replacement time.

Excellent Stability : The steel rivet strengthens the combination of the lining and the shoe to prevent the lining's escape from the shoe.

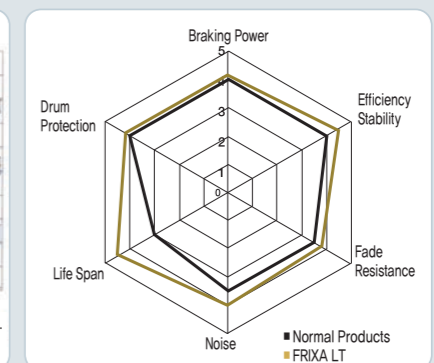

New Concept Brake Lining satisfying all the demands of braking power, Low Noise and Extended Life Span!

Simulation Test Data

※ The smaller deviation between the highest and the lowest point of the red line means the better quality.

Products Characteristics Comparison

We guarantee accurate and safe braking We manufacture and provide the products of all kinds of cars at home and from passenger car to light truck The products of FRIXA has low noise in all vehicles

Confidence in Perfect Control!

Take-off for Northeast Asian Logistics Hub!

For the take-off for Northeast Asian logistics hub, specialization of logistics and reduction of logistics cost is very important. With the high-tech materials, the life span of FRIXA Heavy Duty Vehicle is significantly extended. Logistics specialist choose FRIXA's Heavy-duty Vehicle FX lining. Besides the reduction of logistics cost, it ensures safe drive back home.

FRIXA CORE TECHNOLOGY

Strong Braking Power for Heavy-duty Trucks

FRIXA HEAVY-DUTY VEHICLE's average friction coefficient(0.40-0.45 μ for pad, 0.35-0.40 μ for lining) is suitable for the characteristics of the heavy-duty tractors or the heavy-load dump trucks, demonstrating excellent braking power.

Fade Resistance at High Temperature

Its fade resistance is excellent, which means it maintains constant friction force under the high temperature caused inevitably by braking of the heavy trucks with weighty loads.

Stability at High Temperature

It maintains constant friction force and stability at high temperature, regardless of the velocity of the vehicle or the pressure on the brake pedal.

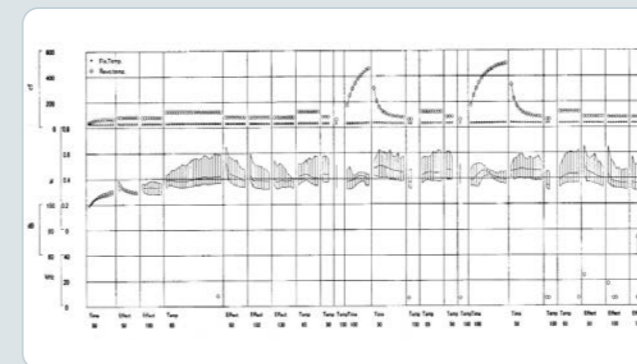

Extended Life Span

It assures superior life span to other products with the excellent heat resistance and fade resistance under the high temperature which frequently occurs to the heavy duty trucks.

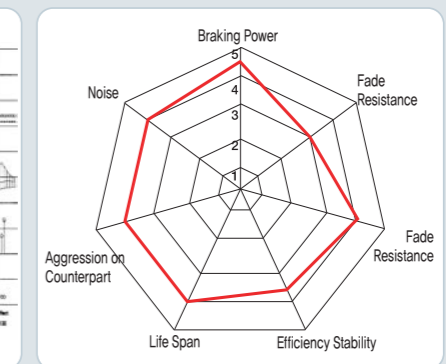

Minimized Aggression on Counterpart

The friction compound's aggression on counterpart is minimized to protect the disc rotor and the drum and prevent noise at braking.

Simulation Test Data

Products Characteristics Comparison

PRODUCTS

Confidence in Perfect Control!

Realization of Highest Level Safety at Industrial Sites!

FRIXA INDUSTRY will secure safety of your industrial site with the brake products of highest braking performance. It has been developed through combination of the friction product manufacturing know-how and the material technology, to maintain stable performance by minimizing braking deviation under the high temperature produced by frequent and repeated braking.

FRIXA CORE TECHNOLOGY

Excellent Braking Power

FRIXA INDUSTRY is the friction product to lower the speed of or stop the machineries at industrial sites, and maintains excellent braking performance even at continuous friction actions.

Product of Longevity

Manufactured with high grade raw material and high-tech production method, it commands much longer life span than other products.

Stable Friction Characteristics

The most ideally harmonized lubricating ingredients enables stable friction characteristics and prevents possible noise under most of the circumstances.

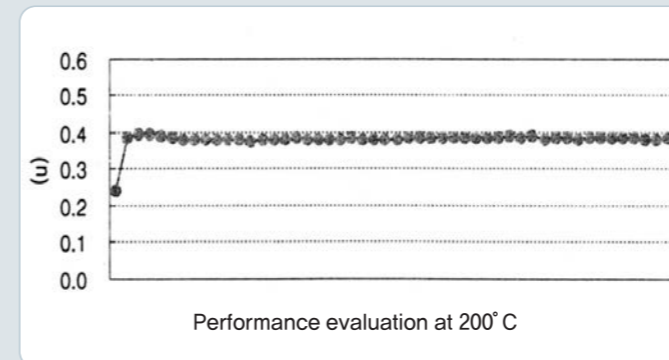

Customized Product

Various types and sizes are produced depending on the nature of the demand for industrial use, and each customer's requirement is fully respected and satisfied.

DISC ROTOR RACING & TUNING

Special Weapon! FRIXA releases High Carbon 2 Piece Light Weight Rotor!
Tune up to FRIXA Spiral Rotor of optimized fade resistance, composition uniformity, tensile strength, heat conductivity and yield strength, which brings you better radiation, higher fuel efficiency and improved braking performance!

Stable Braking, Reduced Noise and Judder, Durability(Abrasion Resistance · Heat Deflection Resistance Crack Resistance), Improved Radiation, Light Weight

FRIXA CORE TECHNOLOGY

Higher braking stability and maximized radiation at high temperature with the innovational 76Fin application.

The heat of the disc produced by its friction against brake pad is cooled by ventilating fins, and FRIXA brake disc is designed to maximize the radiation efficiency with the improved shape and increased number of the ventilating fins.

- FRIXA Brake Disc is the left-right divided type fin shape in spiral form, while the original brake disc is in straight form.
- The first 76 fin in Korea, improving the cooling capacity by 30-40% against other competing products.
- Crack Resistance.
- Having more ventilating fins is advantageous for a brake disc, but it brings about the challenge of achieving mechanical uniformity and light weight design. FRIXA Brake Disc is born with the optimum performance from the technology and know-how accumulated by the research and development works in the racing field for the last 5 years.

Choice of optimum slit through analysis of running environment.

- Slit design of optimum number, length and shape through analysis of running environment for sport and racing.
- Variety of FRIXA's own slit types will be shown on the brake discs to be newly released.

Heat Treatment to improve the Durability

- Casting stress release of the disc by the heat treatment at the temperature reachable by its friction activity.

Verification of the Product Performance in Racing Competition

- FRIXA Brake Disc has been designated as the officially approved parts for the Genesis Coupe One make 3800 class of the CJ O super-race, the most famous professional racing competition in Korea.

Premium edition
FRIXA S1

With more superb performance than that of original version.

FRIXA S1 is a choice of smart customers. You will be extremely satisfied with its superb performance and reasonable price level.

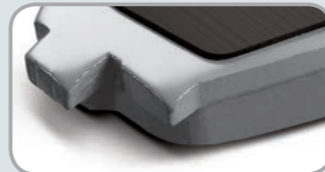

1 Adoption of Double slot
It prevents dust from being stuck to slot or disc surface which causes braking control to be deteriorated. It also plays a role of lowering high temperature caused by friction.

2 Adoption of rubber coating shim
It prevents vibration and heat caused by friction from transmitting to caliper. It reduces noise/vibration and maintains stable braking power.

3 Back plate color
Applies luxurious silver color and texture.

FRIXA CORE TECHNOLOGY

Safe Driving!

FRIXA S1 tells about essence of automotive brake.

- * In auto races requiring extreme braking performance, Frixia S1 is the only brake pad in Korea that competes with globally known brands of brakes.
 - Nominated as official parts by 'CJ O Super Race'(the biggest auto race in Korea) for its main event of the Super 3800 Class(Genesis Coupe Race).
 - Exclusively supplied to SPY-Motorsport, a the champion team of the 'Super light R300 Championship 2009' in United Kingdom.
- * FRIXA S1, where cutting edge racing technology is applied, keeps your safety under any circumstances by realizing high degree of braking control and stability at the same time.
 - Average friction co-efficient exceeds 0.43 μ (0.37 μ for our previous version)

Sensuous Experience!

FRIXA S1, New experience with eco-friendly driving.

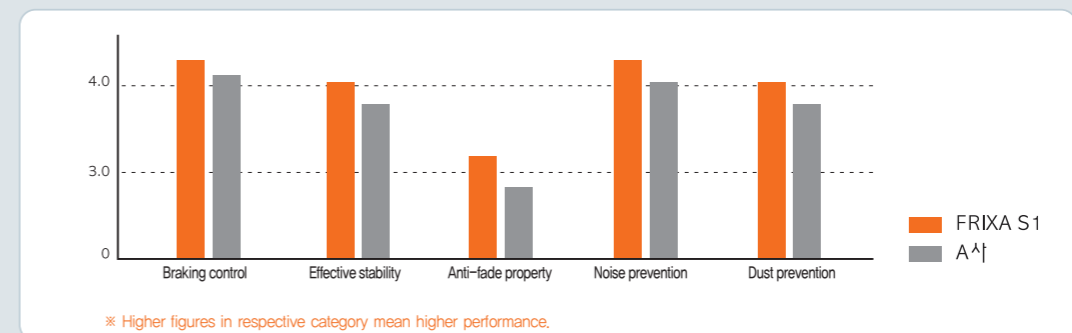

- * Adopts NAO (Asbestos-free eco-friendly material) compound (??) technology which minimizes content of steel, the cause of brake noise, and dust and hard touch.
- * No longer brake noise harsh to your ears and sluggish reaction speed. FRIXA S1 enables you to feel something smooth at the tip of your toes, reacting sensitively to what you are doing. It gives you pleasure of real driving.

Smart Choice!

FRIXA S1 is a choice of smart customers.

- * You, insisting upon an original! You are entitled to be assured of safety by far better performance.
- * FRIXA S1, introduced at reasonable price level, serves your needs to your complete satisfaction with highest performance-to-price.

Performance comparison table between premium products

We guarantee accurate and safe braking We manufacture and provide the products of all kinds of cars at home and from passenger car to light truck The products of FRIXA has low noise in all vehicles
